SUMMARY

Computer Science student and Lead Mobile Engineer overseeing end-to-end development of a production Flutter eSIM app deployed across 23 locales and serving 500,000+ annual users – owning architecture, code quality, release management, and technical direction for 22 feature modules. Experienced in shipping independent products across mobile, web, and ML – from cross-platform apps and full-stack platforms to ML-powered prediction systems – with hands-on expertise in Flutter, Python, and machine learning.

EDUCATION

Faculty of Computer Science & Engineering

Skopje, Macedonia

Bachelor in Computer Science, GPA: 9.2/10

09/2023 – 06/2026

Morenci Area Schools

Morenci, MI, USA

High School Diploma

09/2022 – 06/2023

EXPERIENCE

Lead Mobile Engineer

06/2026 – Present

Hubby eSIM

Flutter, Dart, Riverpod, Firebase, Stripe

- Lead end-to-end development of a production Flutter eSIM app (iOS & Android) serving 500,000+ annual users across 23 locales and 3 build flavors, owning architecture, code quality, release engineering, and technical direction for 22 feature modules.
- Maintain a clean-architecture codebase (Riverpod, GoRouter, Freezed) on a full Firebase stack with Stripe payments, shipping continuously through CI/CD quality gates and Shorebird over-the-air patches.
- Run A/B experiments and monetization flows, monitor stability through Crashlytics and PostHog, and set and enforce team engineering standards for layered architecture and automated CI gates.

Mobile Developer

03/2026 – 05/2026

- Developed and shipped consumer-facing features and core user flows – including eSIM installation and activation across devices – for a fully localized, multi-locale production app using Flutter, Riverpod, and Firebase.

Laboratory Teaching Assistant

10/2025 – 02/2026

Faculty of Computer Science & Engineering Skopje

- Supervised and assisted 200+ students in Structural Programming and Intro to Computer Science laboratory exercises, explained concepts, guided them through exercises, graded assignments, and proctored midterms and finals.

Mobile Developer

10/2024 – Present

NexTime MK

Flutter, Dart, Firebase, Git

- Led the mobile app development and deployment of a cross-platform Flutter appointments scheduling app for Android & iOS.
- Integrated Firebase push and in-app notifications, and scalable state management, ensuring a robust and reliable application.
- Implemented calendar syncing, unit testing, and analytics tracking, optimizing overall app performance and user engagement.

Full-Stack Web Developer

06/2024 – Present

Dental Center Zebekov

FastAPI, PostgreSQL, Docker, Nginx, Next.js

- Built a full dental clinic web platform with a public site and admin dashboard, centered on a robust API and secure experience.
- Implemented doctor management, appointment scheduling with availability checks, multiple calendar views, and multilingual support, expanding reach to international patients and improving operational efficiency.
- Delivered a secure and reliable system using modern technologies and DevOps practices for strong performance and maintainability.

Course Creator

03/2023 – 06/2025

Coddy, Inc

C++ , Python, Java, JavaScript

- Designed and authored 10 practice-driven programming courses with integrated in-browser exercises, bite-sized lessons, and automated evaluation. Produced example solutions, test cases, and instructional content used by 600+ learners on the platform.

PROJECTS

Court Vision AI | Python, FastAPI, PostgreSQL, Docker, NextJS, React, TailwindCSS

06/2025 – Present

- Developed and deployed a full-stack tennis prediction platform, incorporating machine learning models for predictions, backend analytics, ELO ratings, and player statistics.
- Enhanced user experience through a responsive UI/UX, ensuring fast rendering and secure data sharing.
- Implemented data visualization for shot charts and point analytics, providing actionable insights from complex datasets.

Lane Detection CV | Python, OpenCV, U-Net, CNN, Git

08/2025 – 09/2025

- Implemented road lane detection in video using OpenCV for preprocessing and U-Net/CNN architectures for segmentation and feature extraction, enabling accurate lane tracking and deep learning model application.

TECHNICAL SKILLS

Languages: Python, Java, Dart, C++ , SQL, JavaScript, TypeScript

Frameworks: Flutter, FastAPI, Next.js, React

Developer Tools: Git, Docker, CI/CD, Firebase, Nginx, Cloud Hosting

Libraries: Scikit-learn, NumPy, pandas, TailwindCSS, TensorFlow
